Energy Benefits of EIFS Make Splash In Pennsylvania

Falls Church, Va., October 31, 2013— Earlier this year, the EIFS Industry Members Association (EIMA) has launched a visually-stimulating program, showing the benefits of EIFS from coast to coast on a range projects. This program, titled the Quarterly Project Awards Program, will demonstrate the wide range of benefits exterior insulation and finish systems (EIFS) offers. This quarter, the award goes to Dryvit Systems Inc.'s Lancaster Bible College project in Lancaster, PA.

In 2010, the school committed itself to a \$10 million capital campaign to build a central campus hub, housing the Teague Learning Commons as well as the Charles and Gloria Jones Library. The goal was to construct the 41,000-plus square foot building as a "living heartbeat" of the campus, along with possible future expansions as well. The college incorporated sustainable design elements by leveraging Outsulation by Dryvit, their Exterior Insulation and Finish System. Construction broke ground in March of 2011 and was completed for the opening of the new energy efficient Commons and library during the fall 2012 semester.

Among other benefits the college will see from using EIFS, the energy efficiency and continuous insulation benefits will go unmatched.

Founded in 1981, the EIFS Industry Members Association (EIMA) is a national non-profit technical trade association comprised of leading manufacturers, suppliers, distributors and applicators involved in the exterior insulation and finish systems (EIFS) industry.
